KerioConnect

DATASHEET

The email, IM, calendar and collaboration tools you need — *for less*

The award-winning, messaging and collaboration solution, GFI Kerio Connect, meets the needs of small and mid-sized businesses while offering a robust feature lineup. Business users enjoy support for their favorite email client and easy web-based access. GFI Kerio Connect is highly stable — so you can focus on business rather than unexpected downtime and recovery.

Centralized management with GFI AppManager

GFI AppManager simplifies the management of multiple multiple GFI KerioConnect and GFI KerioControl deployments through a secure centralized web interface.

Automated backup

Automated backup with granular restore options ensure quick and easy recovery from all types of disasters.

Email protection

Protection for email users and the network with security features such as SSL encryption, S/MIME and powerful antivirus and anti-spam tools.

Secure mobile support

Secure mobile support for a wide range of devices — from iPhones and Android phones to tablets.

Deliver the cross-platform support end users demand

- Allow users to see the presence of colleagues, chat in real-time, organize meetings and securely compose richly formatted email with GFI Kerio Connect Client via their favorite web browser.
- Utilize the GFI Kerio Connect Desktop Client desktop application for Mac and Windows for an all-in-one standalone messaging application.
- Full support for Outlook (Windows and Mac), native apps for Mac, and any other IMAP or POP compliant email client.

Protect email users and your network with integrated security features

- Get powerful identity and content protection with SSL encryption and S/MIME.
- Reduce inbox clutter of unwanted messages with multiple layers of spam filtering.
- Protect your network from viruses, Trojans, worms, spyware and adware while minimizing impact on memory and system performance with the Antivirus engine.
- Block IP addresses suspected of account and password-guessing attacks, block accounts that have been targeted by password-guessing and even elect not to block guessing by local clients.

Administer email, calendaring and other critical functionality easily

- Stay in control of all your Kerio deployments from anywhere using GFI AppManager. As a cloud based service with 24/7 availability, GFI AppManager remotely monitors your deployments, allowing you to view network, licensing, or system critical events the moment they occur.
- Perform full or differential on-demand or scheduled backups of both data and server configurations without downtime.
- Integrate with popular directory services like Apple Open Directory and Microsoft Active Directory.

Deploy rapidly in any IT environment

- Deploy side-by-side on the same hardware as other business applications and on popular hypervisor platforms, such as VMware and Hyper-V.
- Install Kerio Connect software on existing hardware through support for most versions of Windows, Linux and Mac.
- Leverage free migration tools to move quickly and easily from Exchange, IMAP and any other environment.

GFI KerioConnect AI

GFI KerioConnect AI is a new GenAI feature that provides content generation and summarisation capabilities for GFI KerioConnect. It leverages ChatGPT to understand the context of conversations, suggest improvements to drafted replies, summarize long message threads, translate emails, and provide daily digests of the users' inboxes.
